

ABSTRACT OF THE DISCLOSURE

[00055] A slip cover for a sofa or love seat is disclosed. The slip cover is adjustable in a number of ways to give a good fit for a range of sofa sizes and configurations. Vents are formed in the sides of the back covering portion to accommodate the presence or absence of arms for the seating piece. The seat portion has overlapping sides to fit a range of seat sizes. Front and back skirts are used to wrap the periphery of the sofa piece, thus covering the overhanging sides of the seat portion, the front and back skirts themselves overlapping and being adjustably secured with ties and binding extensions. Arm pieces, where needed, are separate from the back/seat portion of the covering, are adjustable by tucking any excess fabric behind the ruffle seam, and are secured to the legs of the sofa piece.
